

Interventional TreeSHAP: two regimes, one explainer

Shapley values for a RandomForest(20 trees, max_depth=8) on heloc (8,367×23). End-to-end wall clock — explainer construction plus the explanation of n instances — median of 3 runs, single thread. × = curve cut off at the 20 s measurement budget. The three backends return the same values (max deviation 4e-09).
